Nr. 0368 S. 3

1

Claims

1. A communication terminal comprising:
- 5 a) a multimedia generating module for generating a recording in a multimedia format;
- b) a calendar module for enabling a user of said communication terminal to generate a reminder in said multimedia format;
- 10 c) storage module for storing said reminder, and for storing said recording in a multimedia format;
- d) a control module for executing said reminder comprising an executable program; and
- e) a multimedia playing module for playing said recording, and wherein
- 15 said control module is adapted to associate said recording with said reminder and to control said multimedia playing module to play said recording in conjunction with said control module executing said reminder.
- 20
2. A communication terminal according to claim 1 comprising a mobile or cellular phone, a personal digital assistant, a personal computer, or any combination thereof.
- 25
3. A communication terminal according to any of claims 1 or 2, being adapted to connect to a network such as wireless telecommunication network as well as a wired or wireless computer network such as a local area network
- 30 (LAN), wide area network (WAN), metropolitan area network (MAN), internetwork, or any combination thereof.

Nr. 0368 S. 4

2

4. A communication terminal according to any of claims 1 to 3 being adapted to connect to an over the air (OTA), a cable or satellite television network, a power network, or any combination thereof.

5

5. A communication terminal according to any of claims 1 to 4, wherein said recording comprises a text, a series of texts, a picture, a series of pictures, a video sequence, a series of video sequences, an audio track, a series of audio tracks, or any combination thereof.

15

6. A communication terminal according to any of claims 1 to 5, wherein said multimedia format is a multimedia messaging service (MMS) format.

20

7. A communication terminal according to any of claims 1 to 6, wherein said reminder comprises an executable program such as a power up/down sequence, incoming and outgoing call sequence, call termination sequence, network operator service initiation, or any combination thereof.

25

8. A communication terminal according to claim 1-7, wherein said media recording module comprises an input device such as a camera, a microphone, a keyboard, a scanner, a card reader, a biometric reader, an action sensitive display, or any combination thereof.

30

9. A communication terminal according to any of claims 1 to 8 further comprises a memory communication device for connecting to an external memory module through an interface device, which external memory module is adapted

3

to store said reminder and said recording in a multimedia format.

10. A communication terminal according to claim 9,
5 wherein said external memory module comprises a memory card such as a secure digital card, a compact flash card, a smart media card, and a multimedia card, read only memory card such as a SIM card or credit card, a smart card or PC card, or a movable hard or floppy disk drives,
10 or any combination thereof.

11. A communication terminal according to claims 9 or 10, wherein said interface device comprises a wired or wireless connection link.

15

12. A communication terminal according to any of claims 9 to 11, wherein said interface device is adapted to communicate in accordance with a communication protocol such as bluetooth protocol, a transmission control
20 protocol, Internet protocol, user datagram protocol, or any combination thereof.

13. A communication terminal according to any of claims 3 to 12, wherein said communication terminal is adapted to
25 connect to a server through said network.

14. A communication terminal according to claim 13, wherein said communication terminal is adapted to receive said recording and/or reminder from said server, which
30 recording and/or reminder is to be stored in said storage

4

module and played by said multimedia playing module and executed by said control module, respectively.

15. A method for utilising a recording in a multimedia
5 format as a reminder for a calendar application executed on a communication terminal, and comprising:

- (a) generating said recording in a multimedia format by means of a multimedia generating module;
- 10 (b) associating said recording with said reminder by means of a control module;
- (c) storing said recording and said reminder by means of a storage module on said communication terminal; and
- 15 (d) executing said reminder and playing said recording by means of said control module controlling a multimedia playing module.

16. A method according to claim 15, wherein said
generating a recording comprises receiving multimedia
20 data from a server over a network and converting said multimedia data to said recording by means of said multimedia generating module.

17. A method according to claims 15 or 16, wherein said
25 generating a recording further comprises receiving multimedia data from a multimedia recording module of said communication terminal and converting said multimedia data to said recording by means of said multimedia generating module.

30

18. A method according to any of claims 15 to 17, wherein said multimedia format reminder comprises a multimedia messaging service (MMS) format.

1. Feb. 2005 9:17

Nr. 0368 S. 7

5

19. A method according to any of claims 15 to 18, wherein said multimedia data is transferred to said communication terminal or server utilising any type of wired or
5 wireless connection.

20. A method according to any of claims 15 to 19, wherein said method incorporates any features of said communication terminal according claims 1 to 14.
10

21. A system for utilising a recording in a multimedia format as a reminder for a calendar application executed on a communication terminal, and comprising:
15 (a) a communication terminal comprising:
(i) a control module for executing a reminder comprising an executable program;
(ii) a multimedia generating module for generating a recording in a multimedia format;
(iii) storage module for storing said reminder and
20 for storing said recording in a multimedia format; and
(iv) a multimedia playing module for playing said recording; and wherein
25 said control module is adapted to associate said recording with said reminder and to control said multimedia playing module to play said recording in conjunction with said control module executing said reminder; and
30 (b) a server for generating and forwarding said reminder and/or said recording to said communication terminal over communication network.

1. Feb. 2005 9:17

Nr. 0368 S. 8

6

22. A system according to claim 21, wherein said system incorporating any features of the communication terminal according to claims 1 to 14 and any features of the method according to claims 15 to 20.

5
